

# Assignment-4

Name:A.R.Rufus

Reg no:311119106041

Write code and connections in wokwi for the ultrasonic sensor. Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events. Upload document with wokwi share link and images of IBM cloud.

## CODE:

```
#include <WiFi.h>

## LIVE DATA FEED SEEN ON IBM IoT:

The screenshot displays the IBM Watson IoT Platform interface. The browser address bar shows the URL: `k0ly3z.internetofthings.ibmcloud.com/dashboard/devices/browse`. The page title is "IBM Watson IoT Platform". The navigation bar includes "Browse", "Action", "Device Types", and "Interfaces". The main content area shows a device card for "ESP251" with a status of "Connected" and a device type of "ESPALPHA". The card is dated "Nov 9, 2022 1:02 AM". Below the card, the "Recent Events" tab is selected, showing a table of live data events.

Event	Value	Format	Last Received
distance	{"ALERT":9}	json	a few seconds ago
distance	{"distance":104}	json	a few seconds ago
distance	{"distance":155}	json	a few seconds ago
distance	{"ALERT":1}	json	a few seconds ago
distance	{"ALERT":44}	json	a few seconds ago

## INFERENCES:

- The schematics are designed in wokwi website and the code is written to interface the ESP32 connected ultrasonic sensor to IBM IoT platform.
- The simulated distance readings measured using ultrasonic sensor is displayed on the output terminal.
- The sensor readings are sent to and displayed in the IBM IoT platform.
