

Personal Assistance For Seniors Who Are Self-Reliant
PROJECT REPORT

Team ID	PNT2022TMID27535
Project Name	Project – Personal Assistance for senior citizens who are self-reliant

1.INTRODUCTION:

1.1.Project Overview

Elderly people tend to forget which pill should be taken at what time. And also there is much burden placed on the caregivers. This makes the caregivers and also the patients frustrated.

We developed a Web application integrated with IoT device to provide scheduled voice output and display the medicine name on a microcontroller during intake time.

1.2.Purpose

- To cater to the needs of the elderly lacking physical assistance during their course of medication.
- To provide better quality of life for individuals with chronic disabilities and their caregivers.
- Improved ability to stay self-sufficient at home.

2.LITERATURE SURVEY

2.1.Existing Problem

The existing methodologies include various gadgets available to assist patients in taking their medication either by simplifying administration or by assisting them in remembering to do so.

Pill reminder charts, drug diaries, calendar clocks, telephone prompting service, multi compartment compliance aids (MCAs), talking labels, voice reminders, watch reminders, daily pill boxes, and automated pill dispensers are just a few examples.

2.3. Problem Statement Definition

Elderly patients will try to intake medicine on prescribed time but fail to intake medicine on prescribed time because there is no caregiver to remind, Which makes them feel insecure about their health.

3.IDEATION & PROPOSED SOLUTION

3.1.Empathy Map Canvas

3.2.Ideation & Brainstorming

Brainstorm & idea prioritization

3.3.Proposed Solution

An app is built for the user (caretaker) which enables him to set the desired time and medicine. These details will be stored in the IBM Cloudant DB. If the medicine time arrives the web application will send the medicine name to the IoT Device through the IBM IoT platform. The device will receive the medicine name and notify the user with voice commands.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Elderly patients who are in need of pill reminders for taking medicines on time.
2.	Idea / Solution description	Web application integrated with a microcontroller to provide scheduled voice output of the medicine name during intake time
3.	Novelty / Uniqueness	It avoids over dosage of medication by the patients.
4.	Social Impact / Customer Satisfaction	Improved ability to stay self-sufficient at home.
5.	Business Model (Revenue Model)	Revenue can be generated by selling the app at a cost for the users in playstore/App store and also by using the app to advertise pharmaceutical products.
6.	Scalability of the Solution	The app can be further improved to record and analyze daily activities (such as sleep tracking,step counting)to help maintain a successful diet and lead a healthy lifestyle.

3.4.Problem Solution fit

1. CUSTOMER SEGMENT(S) CS <ul style="list-style-type: none"> • Senior citizens aged from 60-80 and caregivers aged from 30-60, who are familiar with the use of smart phone, minimum use of internet at least 2hrs a day and mobile apps. • Individuals with chronic disabilities. • Physically challenged who are self-reliant. 	6.CUSTOMER CONSTRAINTS CC <ul style="list-style-type: none"> • Network connectivity is mandatory. • Device should be near the user's vicinity. • Prior knowledge of using web apps. • Only registered users can access the app. • Pill name and time needs to be entered manually for each medicine to the app. 	5. AVAILABLE SOLUTIONS AS <ul style="list-style-type: none"> • Pill reminder charts, drug diaries, calendar clocks, telephone prompting service, multi compartment compliance aids (MCAs), talking labels, voice reminders, watch reminders, daily pill boxes, and automated pill dispensers.
2. JOBS-TO-BE-DONE / PROBLEMS J&P <ul style="list-style-type: none"> • Less dependant on caregivers. • Accurate medicine intake and notifying system. • Better lifestyle for patients avoiding overdosage. • Wrong intake of pill is not possible. 	9. PROBLEM ROOT CAUSE RC <ul style="list-style-type: none"> • Lack of caregivers. • Population aging causes chronic illness and require medication on a day-to-day basis. • Forgetfulness developed in elderly due to age constraints 	7. BEHAVIOUR BE <ul style="list-style-type: none"> • Customers can use the user-guide available in the 'help' section. • Demo video links will be provided for better understanding about the working.
3. TRIGGERS TR <ul style="list-style-type: none"> • Doctor's recommendation. • Creating website for advertising with features such as online ordering of the product. 4. EMOTIONS: EM <p>BEFORE:</p> <ul style="list-style-type: none"> • Elderly felt insecure about not taking medicine on time <p>AFTER:</p> <ul style="list-style-type: none"> • Elderly users feel confident in taking medication at the right time. 	10. YOUR SOLUTION SL <ul style="list-style-type: none"> • Notifying the medicine name at the appropriate time using voice commands with the help of data fed into the web application which sends the medicine name when the deadline is met. • The user details which are fed into the app are stored in IBM Cloudant DB. • The voice commands are triggered using the Node-Red platform. 	8.CHANNELS of BEHAVIOUR CH <p>ONLINE:</p> <ul style="list-style-type: none"> • The medicine name and intake time is scheduled. <p>OFFLINE:</p> <ul style="list-style-type: none"> • Users get the notification to take the medicine on time

4.REQUIREMENT ANALYSIS

4.1.Functional requirement

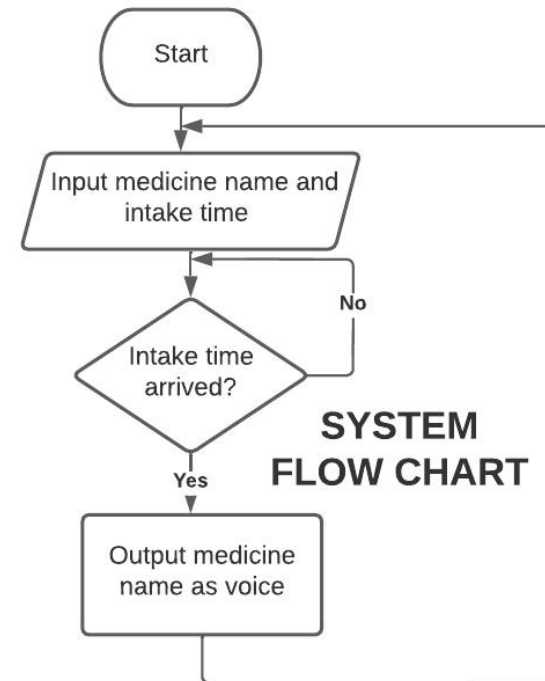

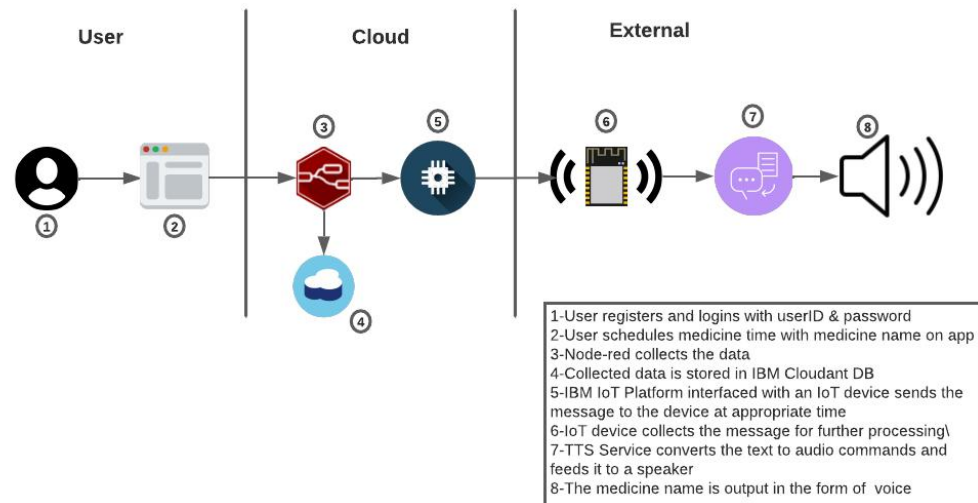

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIn
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	User Login	Login via username and password
FR-4	Network connectivity	Mobile data/Wi-Fi
FR-5	Node-Red	Sends the message from Web App to Iot device at the scheduled time using MQTT protocol.
FR-6	IBM Cloudant DB	For storing user details and medicine details on cloud.

4.2.Non-Functional requirement

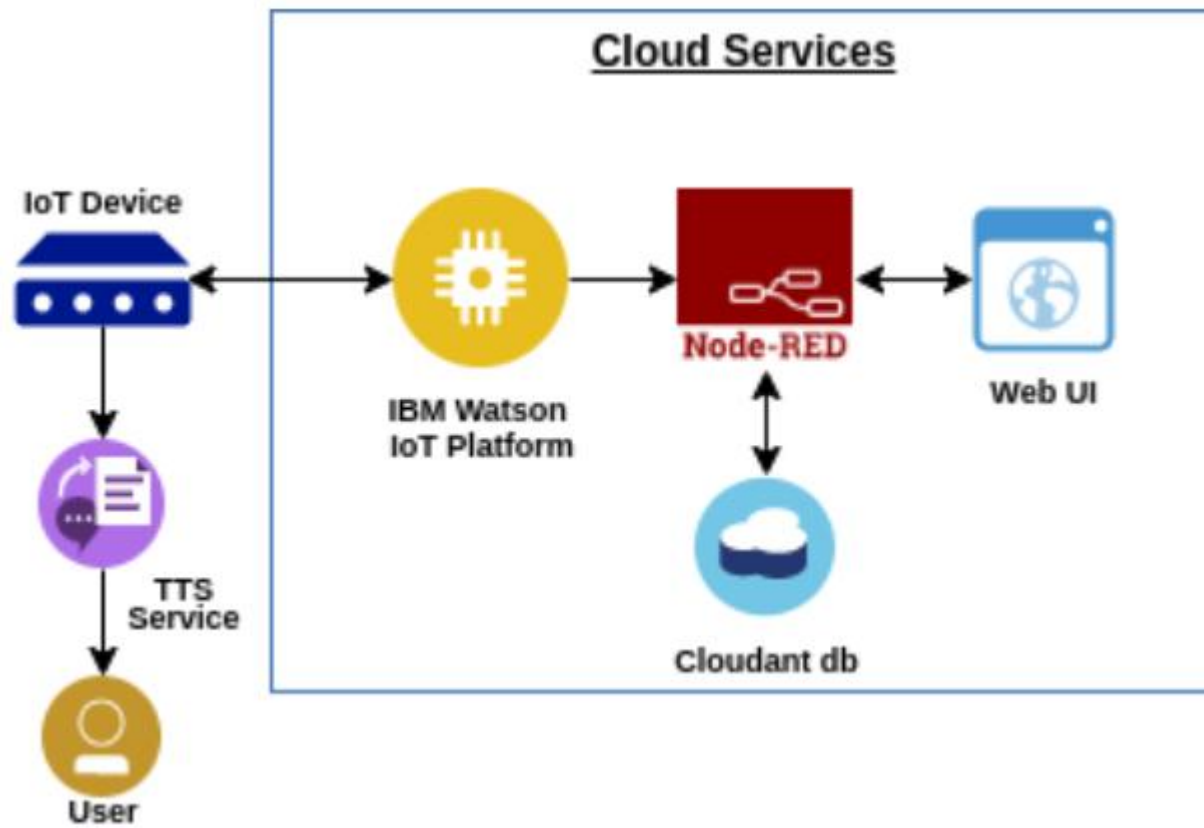

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	It tracks the medication time and signals the user when it's time to take the medicine
NFR-2	Security	IBM Cloudant DB is highly secure from various attacks
NFR-3	Reliability	The app sends scheduled messages to take the medicine on time without any latency.
NFR-4	Performance	The system manages the overall user interaction and increases the efficiency of taking the medicine at the right time.
NFR-5	Availability	The system functions round the clock when connected to the internet.
NFR-6	Scalability	The users can schedule a large number of medicines to be taken in a day using the app

5. Project Design

5.1. Data Flow Diagrams

5.2.Solution & Technical Architecture

5.3.User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Citizen)	Scheduling	USN-1	As a user, I want to take Medicines on time and monitor my health.	I want to take medicines on time	High	Sprint-1
Customer (Patient)	Smart medicine box	USN-2	As a user, I want to take my tablets on time by voice command.	I want to take my tablets on time by voice command	High	Sprint-1
Customer (Doctor)	Smart medicine box	USN-3	As a user, my patient needs to take medicines on time and monitoring the activity.	My patient needs to take medicines on time	Low	Sprint-2
Customer (CareTaker)	Data storage	USN-4	As a user, my patient needs medication time and prescription should load in the database for the upcoming week.	My patient medication time and prescription should be in database list	Medium	Sprint-3
Customer (CareTaker)	Smart medicine box	USN-5	As a user, I need to take my medicine in nearby places with light notification.	I want to access the customer health 24/7	High	Sprint-4
Customer (Patient)	User Experience	USN-6	As a user,the app should be easy and simple to use	I want an easy to handle application	Medium	Sprint-4

8.2.User Acceptance Testing(UAT):

Purpose of Document:

The purpose of this document is to briefly explain the test coverage and open issues of the Personal assistance for seniors who are Self-Reliant project at the time of the release to User Acceptance Testing (UAT).

Defect Analysis:

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	5	3	1	2	11
Duplicate	2	1	0	0	3
External	2	2	0	0	4
Fixed	10	2	3	15	30
Not Reproduced	0	1	0	0	1
Skipped	0	0	2	0	2
Won't Fix	0	2	4	5	11
Totals	19	10	8	22	62

Test Case Analysis:

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	5	0	0	5
Client Application	42	0	0	43
Security	1	0	0	1
Outsource Shipping	0	0	0	0
Exception Reporting	2	0	0	2
Final Report Output	6	0	0	6
Version Control	1	0	0	1

1	Providing Assistance to Seniors by developing a Software application to remind their medicine intake time	LOAD	MET	Able to Support in Other Platforms	GO	To have browsers to have enhanced capabilities	

10.ADVANTAGES & DISADVANTAGES

Advantages:

- Helpful for people who have no caretakers.
- Helps people to take medicines on time by voice command.

Disadvantages:

- Elderly people should be aware of how to use the application.
- There is no way to determine what actually happened as it only gives the remainder to take the medicineInternet connection is required.

11.Conclusion

Our project's goal is to see how successful an automated pilldispenser will be in assisting individuals in better self-managing their medications. This might be demonstrated by the following:

- Better quality of life for individuals with chronic disabilities and their caregivers.
- Improved ability to stay self-sufficient at home.
- Social impact on the pharma sector .
- Less dependency on health-care and social-services.

The device is intended for those with memory impairments, and several of the medical diagnoses recorded for trial participants, including Alzheimer's and dementia, the elderly and persons with long-term medical conditions who must take many prescriptions every day, backed up this claim.

In conclusion, we used technology to have a social effect in the pharmaceutical industry.

12.Future scope:

- We will further extend the app where the prescriptions of the patients will be directly uploaded to the database.
- When your medicine runs low, we will reach out to third parties so you can get it delivered at your door.
- Touch sensors can be incorporated on each compartment to track the number of times the compartment has been opened so that refill time can be calculated.
